1. Introduction and Overview

M365 Copilot at ASML

ASML

Your M365 Copilot Access Steps

Follow these three steps to activate your license

Activate your license

1

Sign the Acceptable Use Policy to activate your Copilot license:

License Activation Link

Activation process

2

After signing the policy, it takes **2-3 days for your Copilot license to be activated**.

Support

3

If your Copilot license is not active after 3 days, **please reach out the technical support team**: copilot@asml.com

Welcome onboard to our ASML M365 Copilot flight!

Together we will fly towards Copilot proficiency

BOARDING PASS

PASSENGER NAME

M365 Copilot Licensed Employee

GATE NUMBER

Via Teams channels, webinars and Viva Engage

FLIGHT DATE

May 2025

M365 Copilot ASML flight

Let‘s check out our flight route!

You are in Session 3 – Content Generation

Personal Productivity

Session 1

Topic 1: Copilot Essentials & Prompting

Topic 2: M365 Copilot Chat

Topic 3: Teams & Outlook

Meeting and Collaboration

Session 2

Topic 1: Teams Meetings

Topic 2: OneNote

Topic 3: Whiteboard & Loop

Content Generation

Session 3

Topic 1: Word

Topic 2: PowerPoint

Topic 3: Excel

Mastering M365 Copilot – Wrap up

Session 4

Topic 1: Prompting Refreshment

Topic 2: M365 Applications and Main Functionalities

Topic 3: Exercises and Live Demos

Copilot in Word

Overview

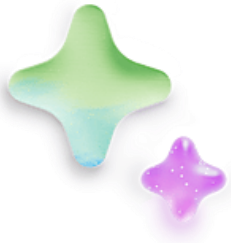
Copilot in Word **supports** you in your daily work by helping you to **catch up**, **create**, **edit**, and **asking questions** about the content.

Limitations

- Your document needs to have between 300 – 20.000 words to generate summaries (max. ~90 pages)
- You can only reference other word files, PDFs, and PPT (so not Excel)
- Only references to text from files
- Copilot cannot change the font and format of its output

CATCH UP

Query data in the document from a referenced file



CREATE

Create a first draft, bringing in information of reference files from across your organization as needed

EDIT

Add content to existing documents, summarize texts, and rewrite sections with suggested tones

ASK

Get suggestions to strengthen your argument, summarize texts or just ask questions about the content

Application Training

2.1 Benefits and use cases

2.2 Access

2.3 Prompting

ASML

Exercise 1: Access Copilot in Word

Let’s practice together!

Word | Access

1. Navigate to Home tab

You can find the Copilot button in the top ribbon of the Home tab within Word.

2. Access Copilot on the side bar

Click on the Copilot button to activate and access Copilot.

3. Options

There are highlighted options you can use directly by clicking on it or write your own prompt directly in the text window.

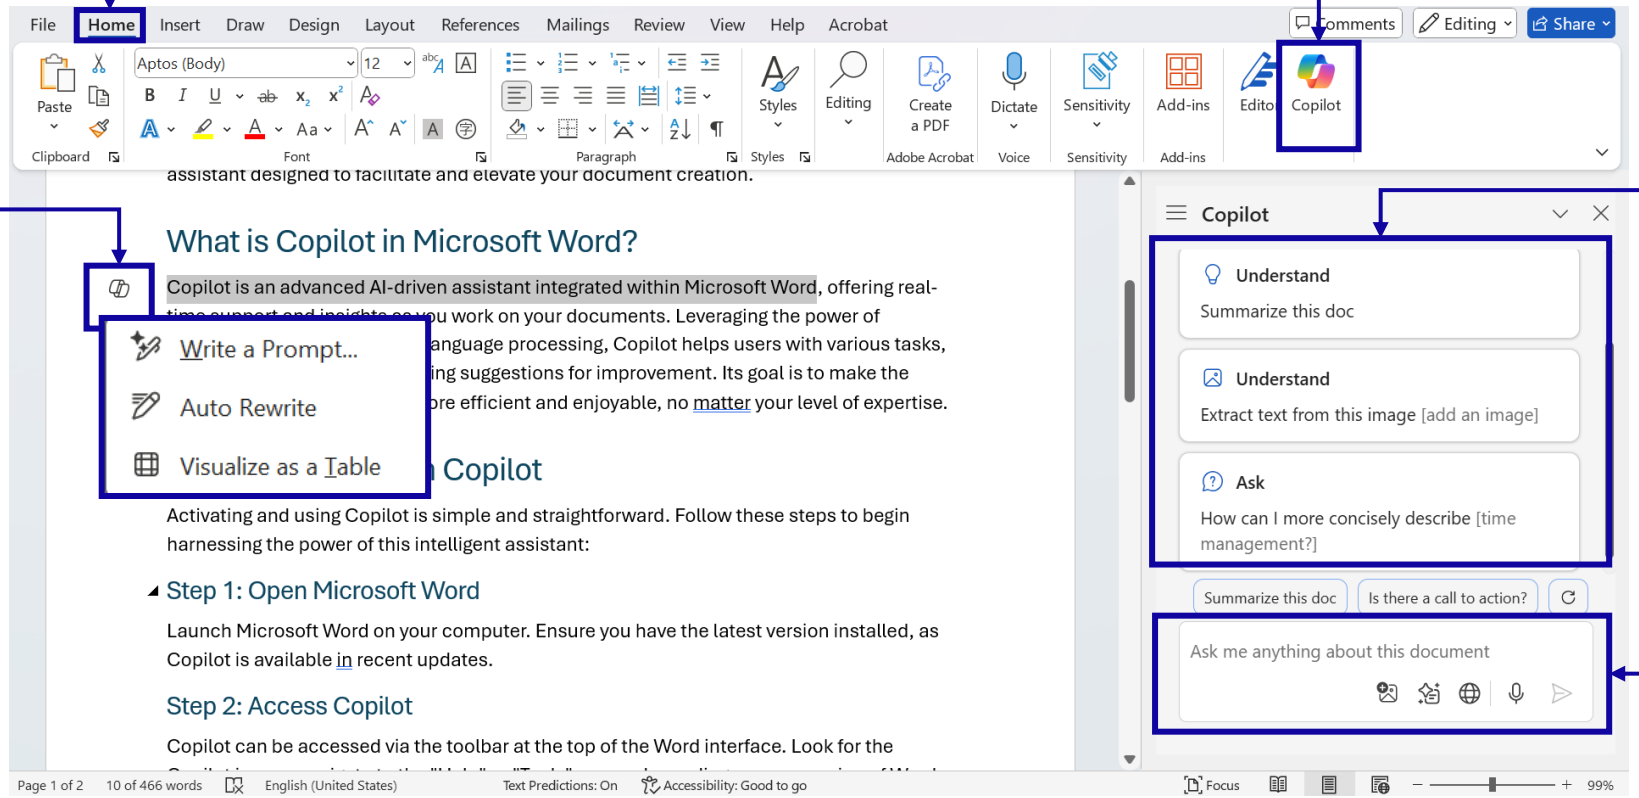
4. Ask

Ask your questions and provide your prompt here.

5. Access Copilot in the document

The Copilot button within the document is **different** from the sidebar Copilot window.

The 2 main **differences** are that the text will **directly be generated into the document** and here Copilot will provide **3 options**: Make changes (draft with Copilot) / Auto Rewrite / Visualize as a Table.

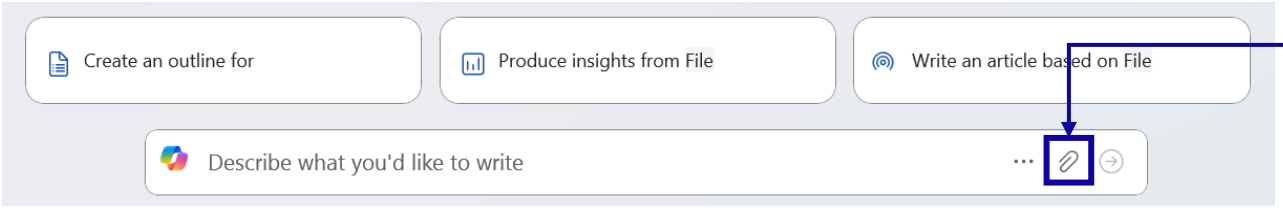


Let’s zoom in on this feature on the next slide.

Adjusting content directly in your Word document

Use case

Word | Access



Reference a File

Choose a file with text that you would like Copilot to reference from using / while writing your description to easily search for a file.

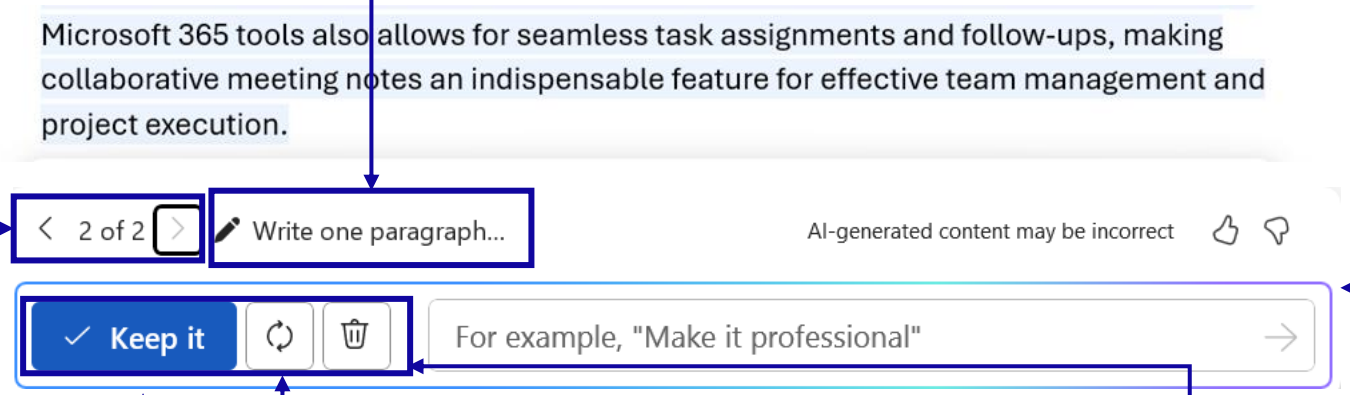
Edit prompt

Selecting this field displays the entire prompt that you initially entered and allows you to edit it. When you submit the edited prompt, Copilot creates a new draft based on the edited prompt.

Move from draft to draft

The current draft being displayed in this image is draft 2 of 2.

When you select the **Regenerate** icon or you enter a prompt with a change request, Copilot creates a new draft while retaining access to the previous ones. To review an earlier draft, select the backward arrow (and vice versa).



Prompt for change request

To update the current draft, enter your request in this prompt field and select the Generate icon (or arrow).

Keep your current draft

Once satisfied select Keep it to change the current draft to a Word document.

Regenerate

Select Regenerate to have Copilot to create an entirely new version from scratch.

Discard it

Scrap all the drafts created by Copilot and start over from scratch.

Validating references

Use case

Word | Access

It’s important to review the output that Copilot delivers, one way to do so is by asking Copilot for references to the sources it has used.

Prompt used

Add references to the sources you have used.

Application Training

2.1 Benefits and use cases

2.2 Access

2.3 Prompting

ASML

Prompting in Word

Try out the following useful prompts!

Word | Prompting

Remove your writer's block

Create a template about [topic].

Generate a [summary, overview, outline, etc.] about [topic] in a [tone].

Proofread and make suggestions on [reference file].

Kickstart your document

I'm a [**role**]. **Write a policy document about [**topic] **targeting** [audience].

Rewrite this text according to this writing style guide [link].

Create 3 quiz questions with 4 answer options for each question based on this material /[reference]

Summarize and Ask

Write me an abstract of this document.

Summarise this doc. Use language that a non-technical person will understand, such as my 60-year-old mom.

Generate a [summary, overview, outline, etc.] about [topic] in a [tone].

Exercise 2: Draft and add content in Word

Let’s practice together!

Word | Prompting

1. Start a **new blank document**.

2. In the **Draft with Copilot** box, type or paste your prompt.
   For example, ***Draft a proposal for improving the efficiency of ASML's manufacturing operations***

3. Select **Generate**, and Copilot will draft new content for you.

4. Once Copilot generates content, select **Keep it** keep the content, **Regenerate** to regenerate a response, **Discard** to discard the content, or **fine tune the draft** by entering details into the prompt field, like ***"Make it more concise."***

Share your generated text in the chat!

ASML

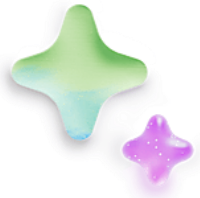
Copilot in PowerPoint

Overview

Copilot in PowerPoint can help you turn your ideas into presentations. Copilot can **transform** existing written documents into decks complete with speaker notes and sources or **start a new presentation** from a simple prompt or outline.

Limitations

- Can only reference to text in files
- When creating a presentation, Copilot works best with Word documents that are less than 24 MB
- Copilot uses Microsoft stock photos, not photos from brand library yet
- The PowerPoint (master) template can be used as a baseline only if open a file that uses the master template



CREATE

Transform a Word document into a PowerPoint presentation or start a new presentation from a prompt

EDIT

Summarize or condense lengthy presentations into fewer slides, adjust layouts, and apply formatting

UNDERSTAND

Generate detailed speaker notes and transform text based on your requirements

ASK

Clarify items, information, or any topics in your existing presentation

Digital
Transformation
Engine

3. Copilot in PowerPoint

Application Training

3.1 Benefits and use cases

3.2 Access

3.3 Prompting

ASML

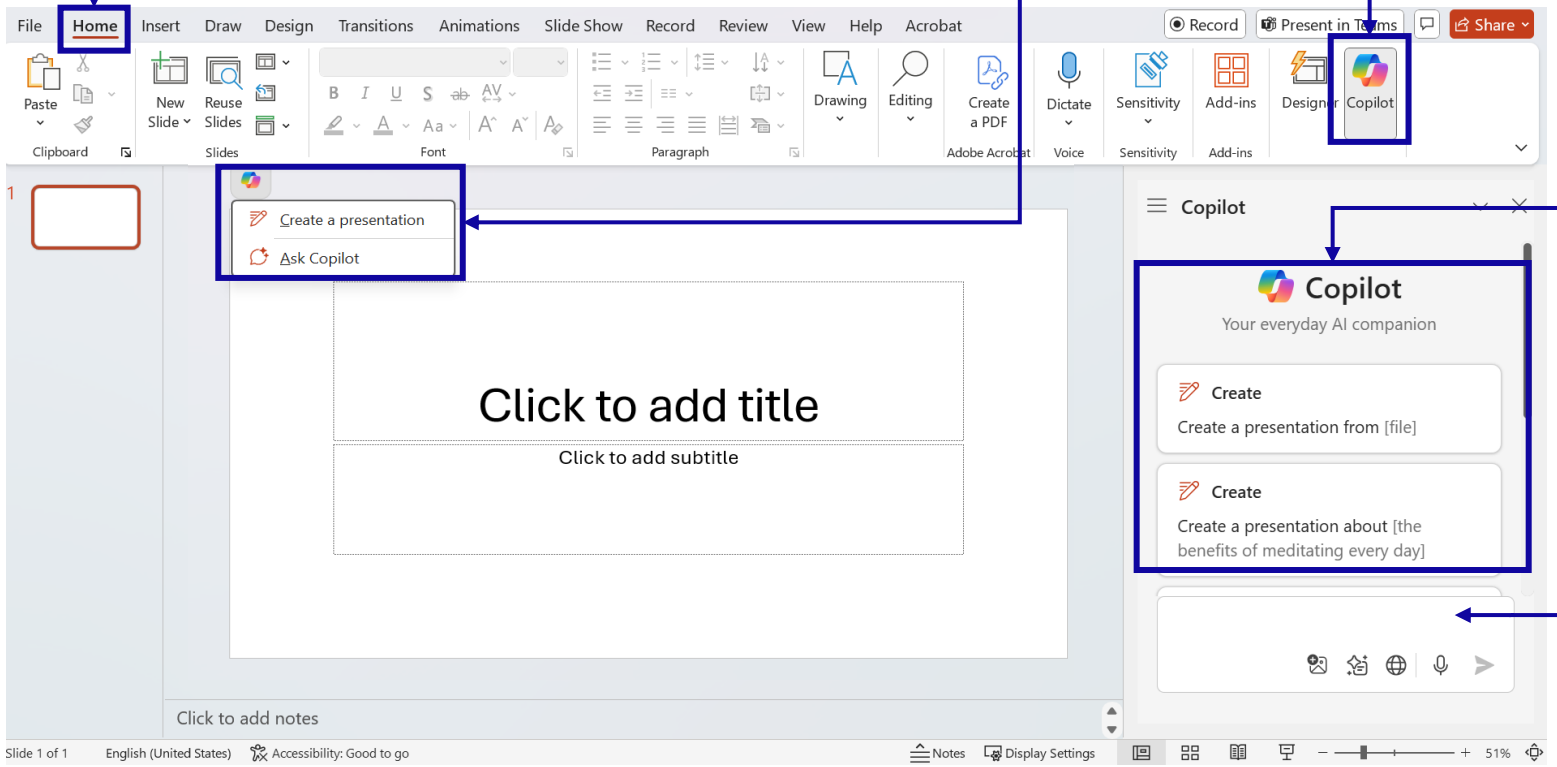
Exercise 3: Access Copilot in PowerPoint

Let’s practice together!

PowerPoint | Access

1. Navigate to Home tab

You can find the Copilot button in the top ribbon of the Home tab in PowerPoint.



2. Access Copilot

Click on the Copilot button to activate and access Copilot.

3. Choose your prompt

Choose one of the prebuilt prompts or enter your own prompt in the prompt field.

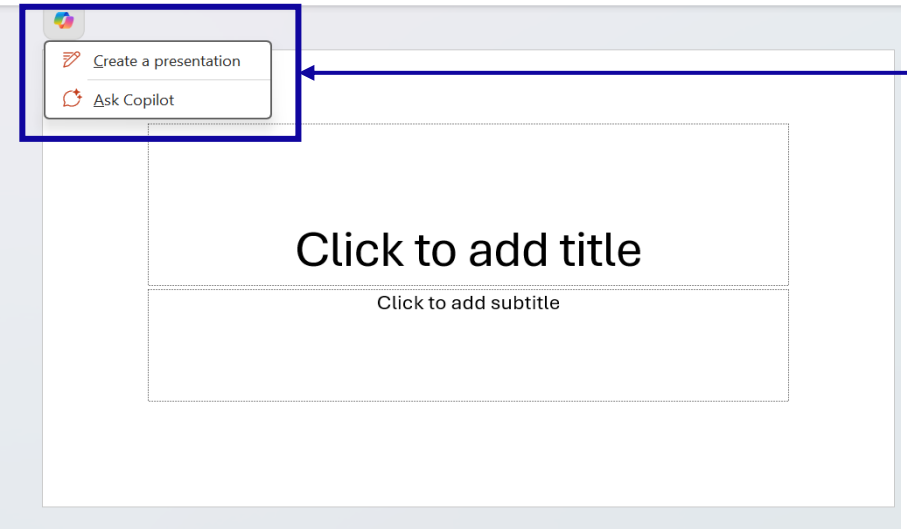
4. Reference a file

To reference a file, use the forward slash or paste the link into the prompt field.

Starting on a blank presentation

Use case

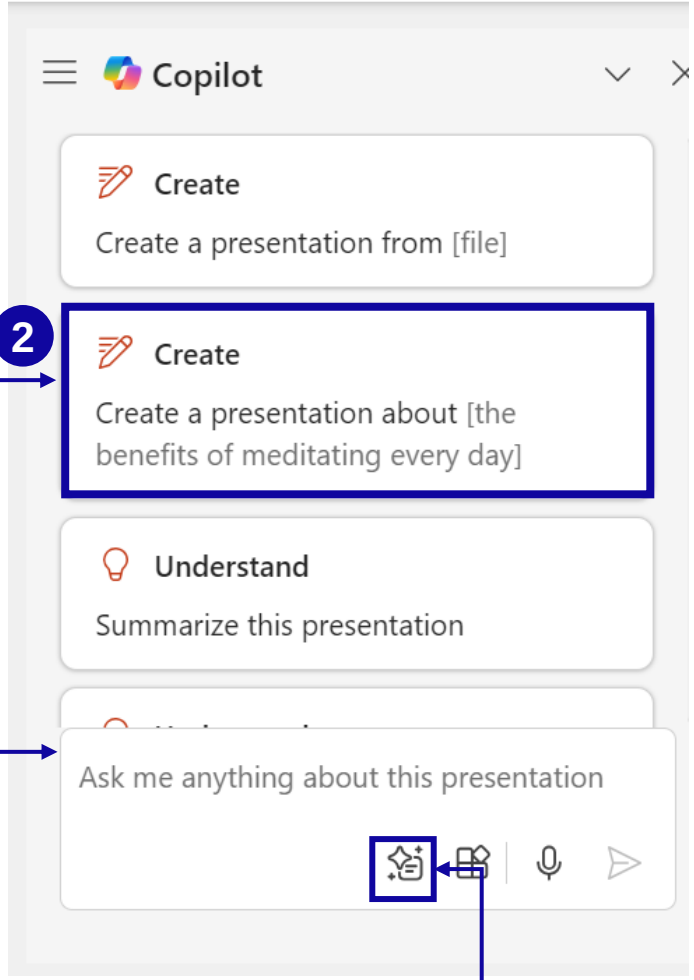
PowerPoint | Access



1

Create a presentation

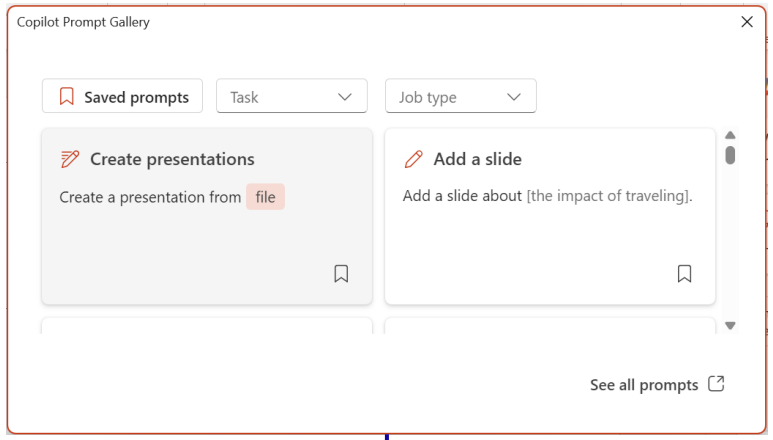
You can ask Copilot to create a presentation from scratch based on the information that you provide.



2

View prompts

Click the View Prompt button to display the prebuilt prompts. Need more inspiration? Click on View prompts and the **Copilot lab** will open.

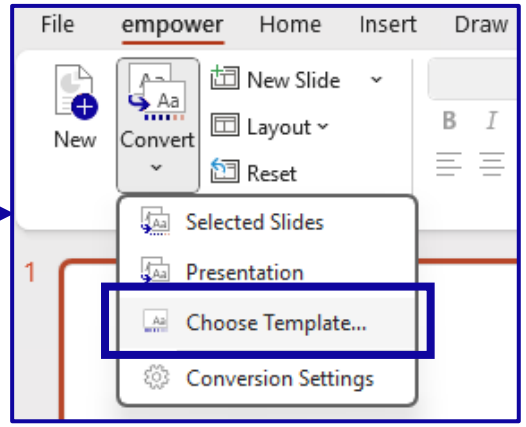


Exercise 4: Starting on a blank presentation

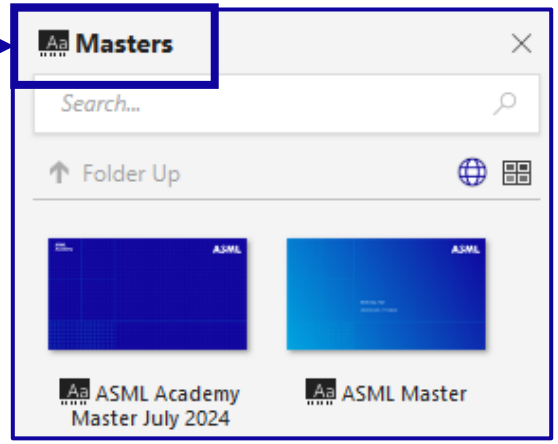
Let’s practice together!

PowerPoint | Access

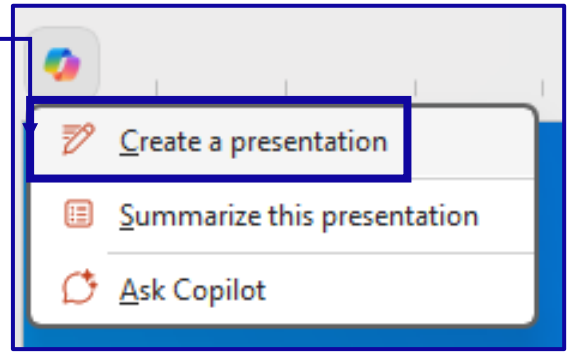
1 Open a **new/blank presentation** and choose a template on the **empower tab**.



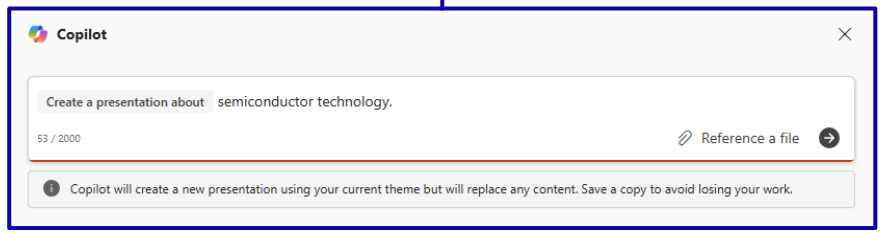
2 Choose a **Master template** from your master decks available to you.



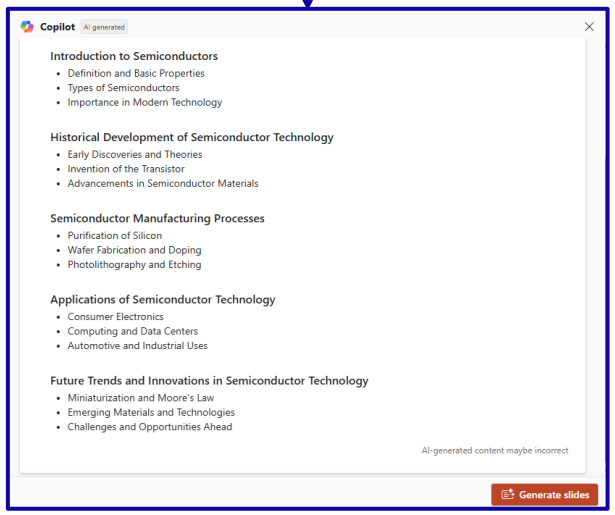
3 Click on the **Copilot icon** on the left top of the slide and click on **Create a presentation**.



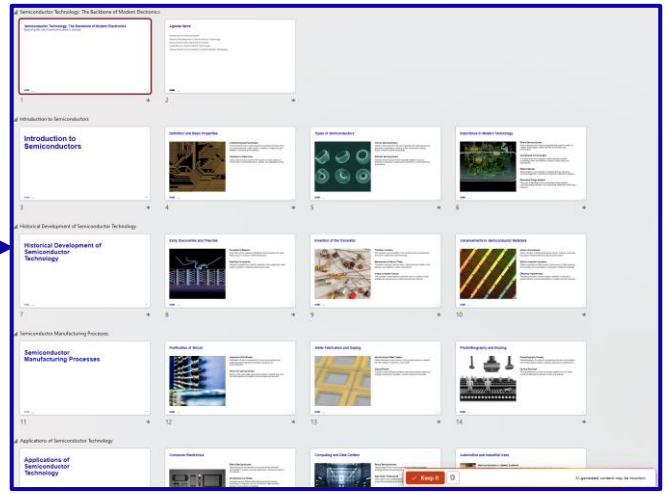
4 Use the prompt: ***Create a presentation about semiconductor technology.***



5 You can **adjust the content** for the slides that should be generated.



6 You can **adjust layouts, reformat text and time animations** as you wish.



Creating a new presentation from a file

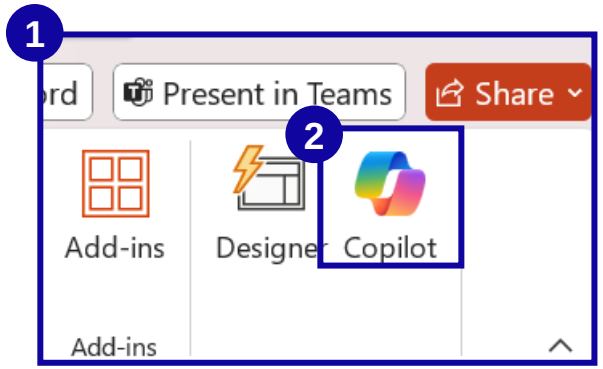
Use case

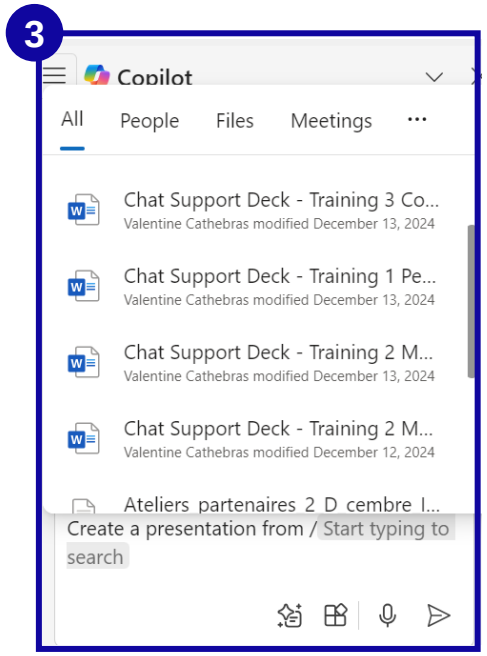
PowerPoint | Access

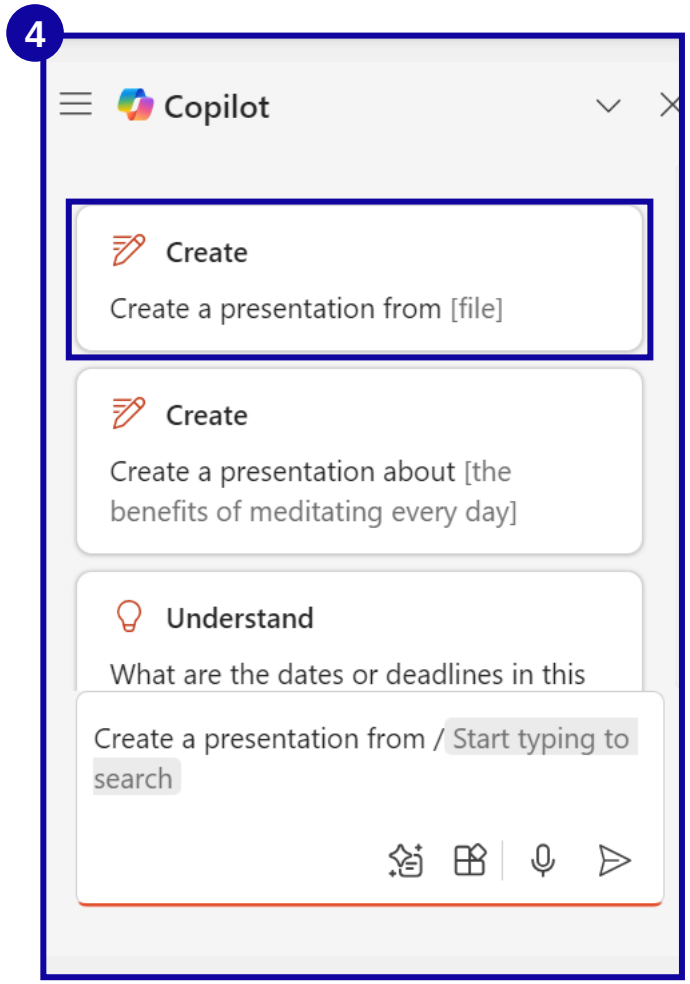
1. Create a new presentation in PowerPoint.
2. Select the Copilot button in the Home tab of the ribbon, and then Select or type **Create presentation from file.**
3. **Select the document you want** from the picker that appears. If you don't see the document you want, **start typing** any part of the filename to search for it.

   You can use a Word or a PDF document, and encrypted documents are available as well.
4. **Select Send and Copilot will draft a presentation for you!**

   Once generated, you can edit the presentation according to your needs.



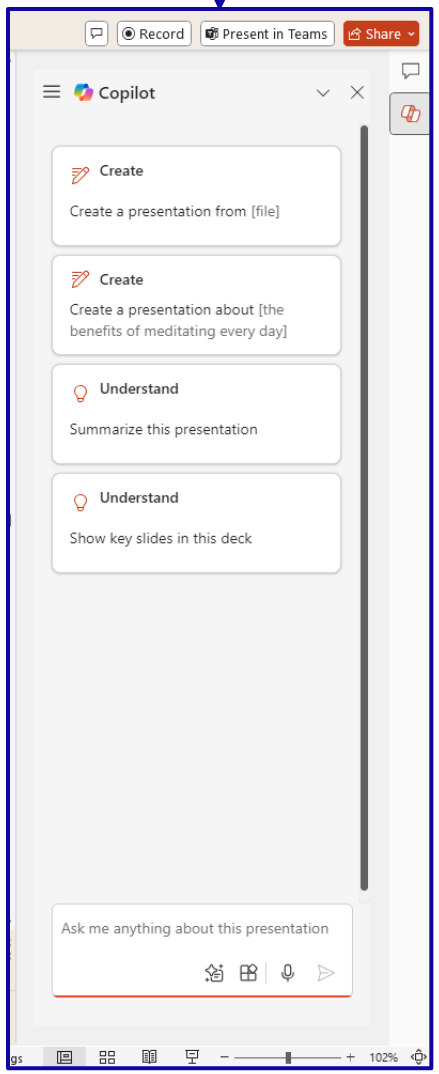




Using Copilot in an existing PowerPoint presentation

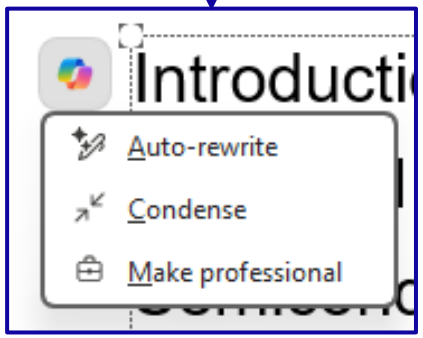
PowerPoint | Access

Use case



Features

When using Copilot on an existing PowerPoint presentation, **other options are provided** when you open the Copilot window.



Text Adjustments

Within a slide, you find the Copilot icon next to texts. You can **directly auto-rewrite, condense or adjust the text** with Copilot.

Copilot offers **pre-defined prompts** to help you create, understand, edit and ask questions about your existing presentations.

For example, you're able to **summarize the presentation** or **ask questions** about it.

You can also edit your presentation and **make adjustments to your slides**, such as reformatting text, changing layout and adding visual elements. Copilot can also ensure consistency across your presentation.

3.3 Prompting

ASML

Prompting in PowerPoint

Try out the following useful prompts!

PowerPoint | Prompting

Create new presentations

Create a presentation from [file].

Add an agenda slide.

Create a presentation about how to [effectively volunteer for non-profit organizations] with a slide about how to evaluate impact.

Brainstorm topic ideas for a presentation on [topic].

Adjust existing presentations

Add a slide about [topic].

Organize this presentation.

Add speaker notes to this presentation / slide / all slides.
Add a stock image / brand image.

What **is the tone** of this presentation?

Understand presentations better

Summarize this presentation**. Extract key information** from this presentation.

What are the **dates and deadlines** mentioned in this presentation?

Show **key slides** in this deck.

Create a one slider of slide 5-10.

Extract and list all slide titles **to create a table of contents.**

Exercise 5: Summarizing slides in PowerPoint

Let’s practice together!

PowerPoint | Prompting

1. **Open** an existing PowerPoint document.
2. Select **Copilot** from the ribbon to open the Copilot pane.
3. Navigate to the Copilot Pane, and prompt Copilot to **summarize your slide deck** for you, by e.g., prompting; ***Consolidate this presentation into a summary highlighting the key aspects of the content*.**
4. **Review the generated page and share your feedback in the chat!**

4.3 Prompting

ASML

Copilot in Excel

Overview

Copilot in Excel **supports** you in your daily work by helping you **understanding**, creating and **editing** about the content.

Limitations

- You cannot query what your colleagues are doing with the data when working on a shared document
- You cannot summarize extensive amounts of texts in Excel
- Copilot in Excel cannot use reference to Excel or PDF files
- Copilot in Excel does not work across tabs
- Cannot work on an excel weighing more than 2M cells

CREATE

Generate automatic analyses from data in table cells, suggest new formulas and generate models based on questions

EDIT

Sort and filter content with Copilot and design visually appealing data outlines

UNDERSTAND

Generate formulas withing tables, analyze data, reveal correlations, identify trends, or ask for recommendations

Digital
Transformation
Engine

4. Copilot in Excel

Application Training

4.1 Benefits and use cases

4.3 Prompting

ASML

Exercise 6: Access Copilot in Excel

Let’s practice together!

Excel | Access

1. Navigate to Home tab

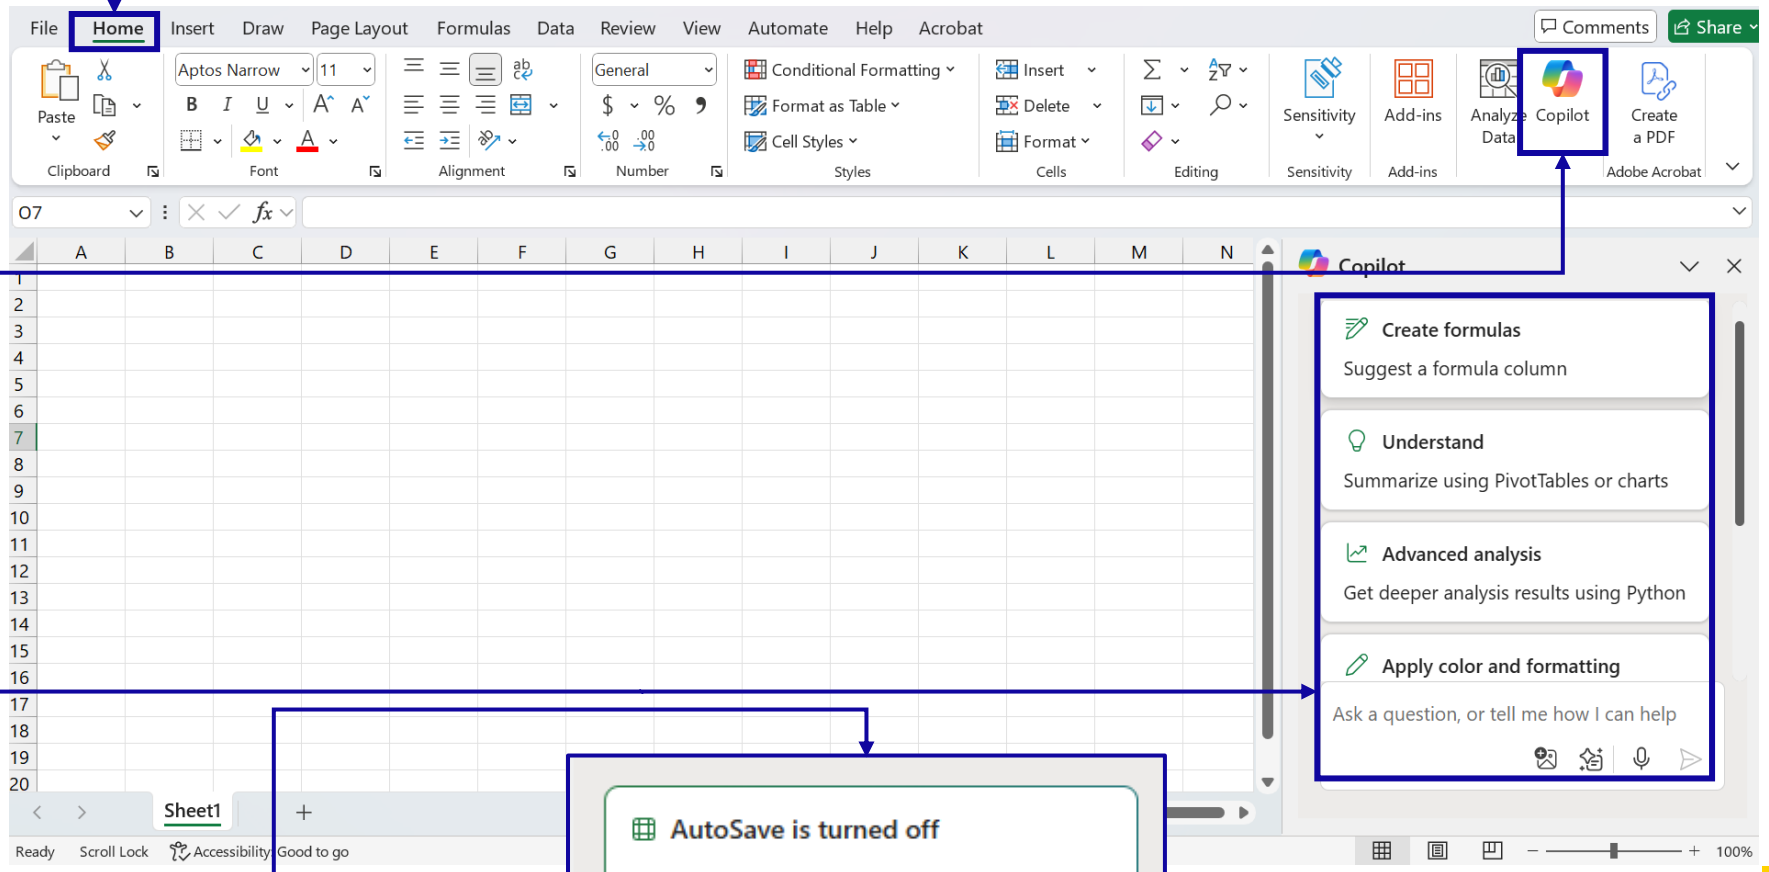
You can find the Copilot button in the top ribbon of the Home tab within Excel.

2. Access Copilot

Click on the Copilot button to activate and access Copilot.

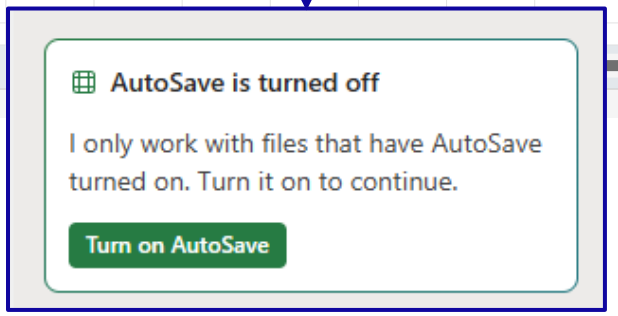
3. Use suggested prompts

Use suggested prompts to start creating.



Turn on AutoSave

You need to turn on AutoSave that you can use Copilot in a blank Excel file.



Exercise 7: Identify insights in Excel with Copilot

Let‘s practice together!

Excel | Prompting

1. Open the **Excel file** via the link in the Teams chat and make sure to open the sheet *“X”.*

2. Format the **data as a table**.

3. What segment has the highest number of sales?

   A. Corporate
   B. Consumer
   C. Home Office

   Share your answer in the chat!

Digital
Transformation
Engine

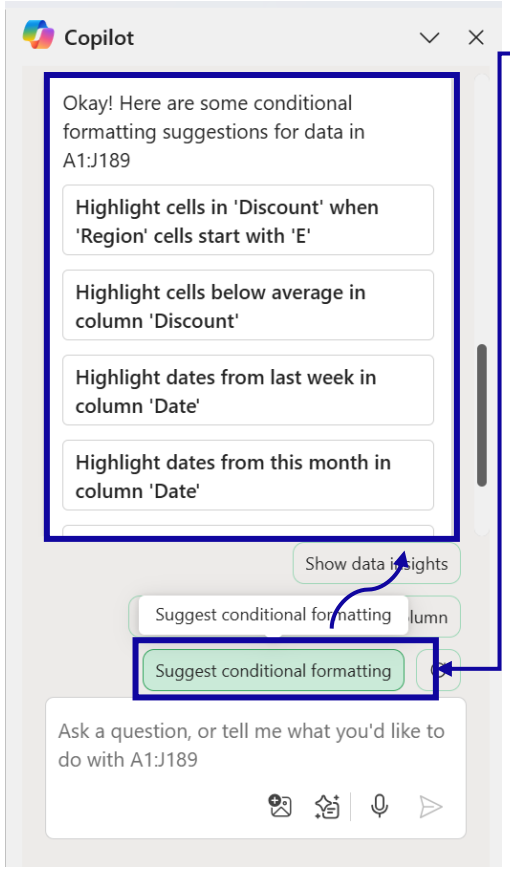
Answer:

B. Customer

Applying color and format

Use case

Excel | Access

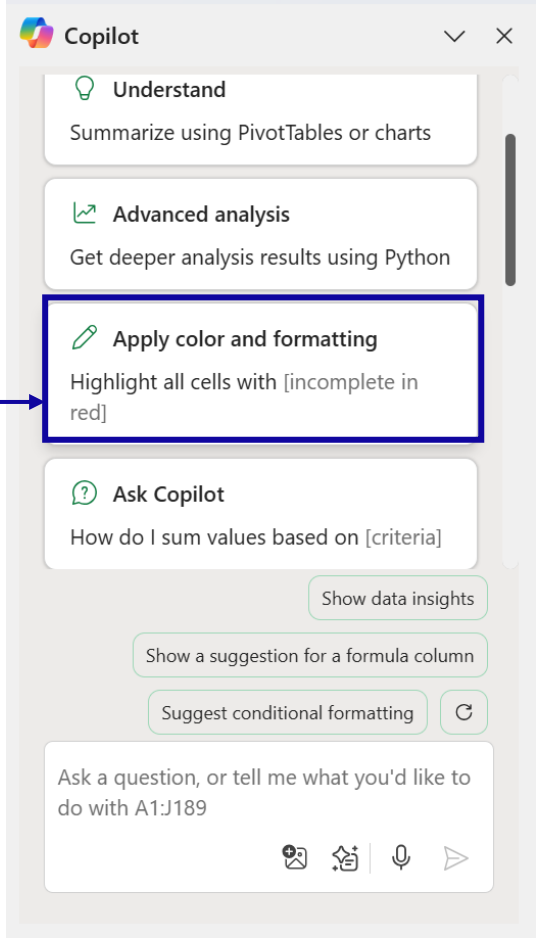


1. Choose from suggested prompts

By clicking 'Suggest conditional formatting', you will have a list of suggested prompt to choose from.

2. Draft a prompt on your own

Be creative and use one of the example prompts to Copilot.



Example prompts:

To **highlight** your data, try this:

- *Bold the top 10 values in the Sales column.*
- *Highlight the highest values in Units Sold.*

To **sort** your data, try this:

- *Sort engagement rate from smallest to largest.*
- *Sort column D ascending.*

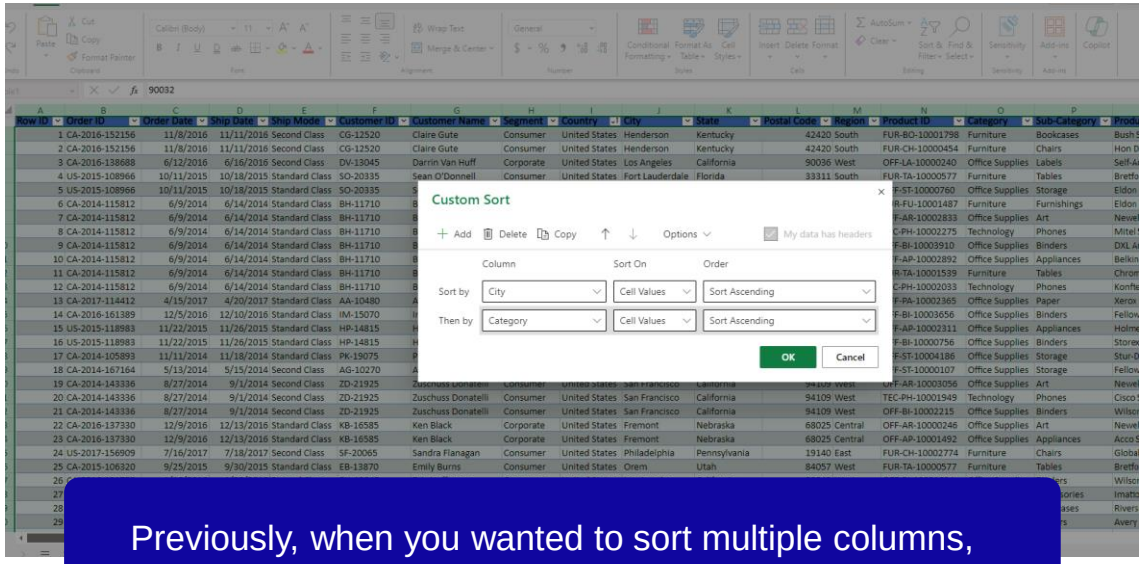
To **filter** your data, try this:

- *Filter to items that are due next week.*

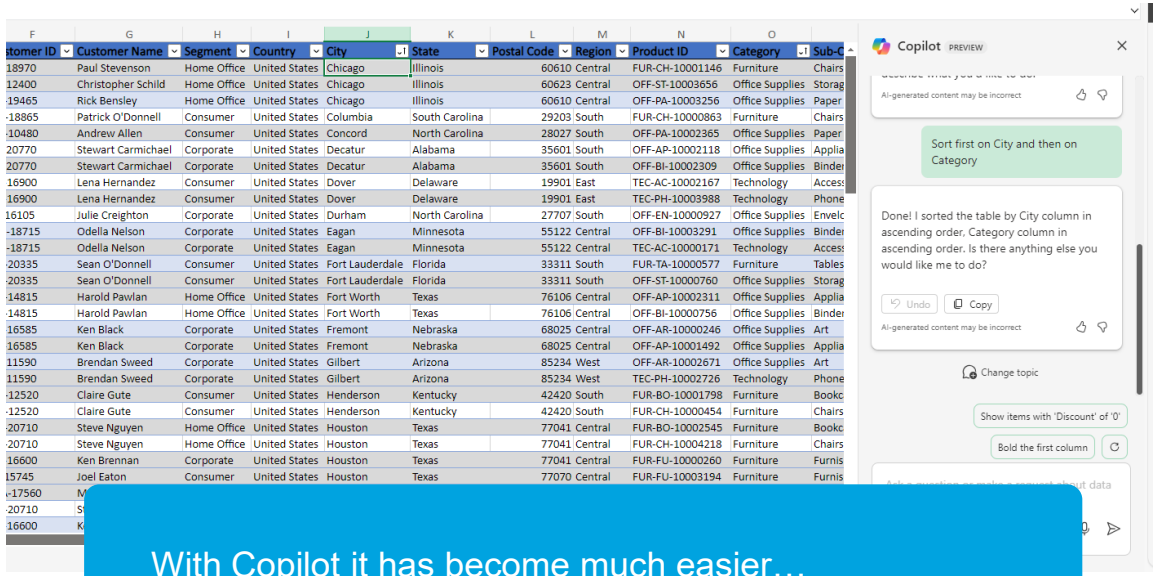
Example of Sorting

Use case

Excel | Access



Previously, when you wanted to sort multiple columns, you had to do that manually using the ‘Custom sort’.



With Copilot it has become much easier…

Generating formular columns

Use case

Excel | Access

1. Select “Create formulas”

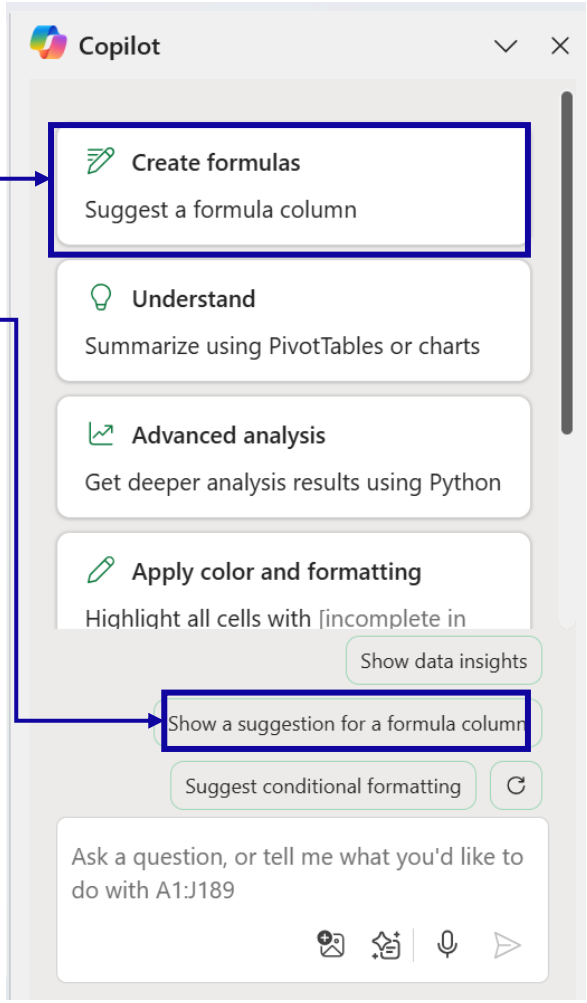
Open Copilot and select Add formula columns to show suggestions for formula columns.

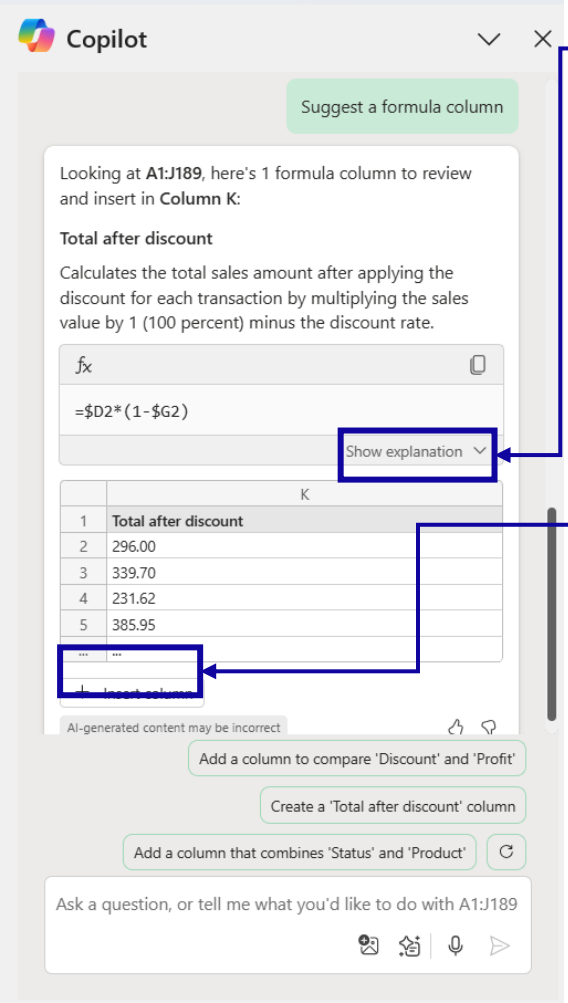
2. Choose a prompt

Choose a suggested prompt or describe what you’d like to know by asking a question about your data.

Example prompts:

- Calculate total cost per product in a new column.
- Add a column that calculates the total profit for each marketing campaign in 2022.
- Add a column that calculates the number of days after the product launch event.





3. View explanation

After Copilot has analyzed your data, review many different insights to find ones that help you make the most of your data.

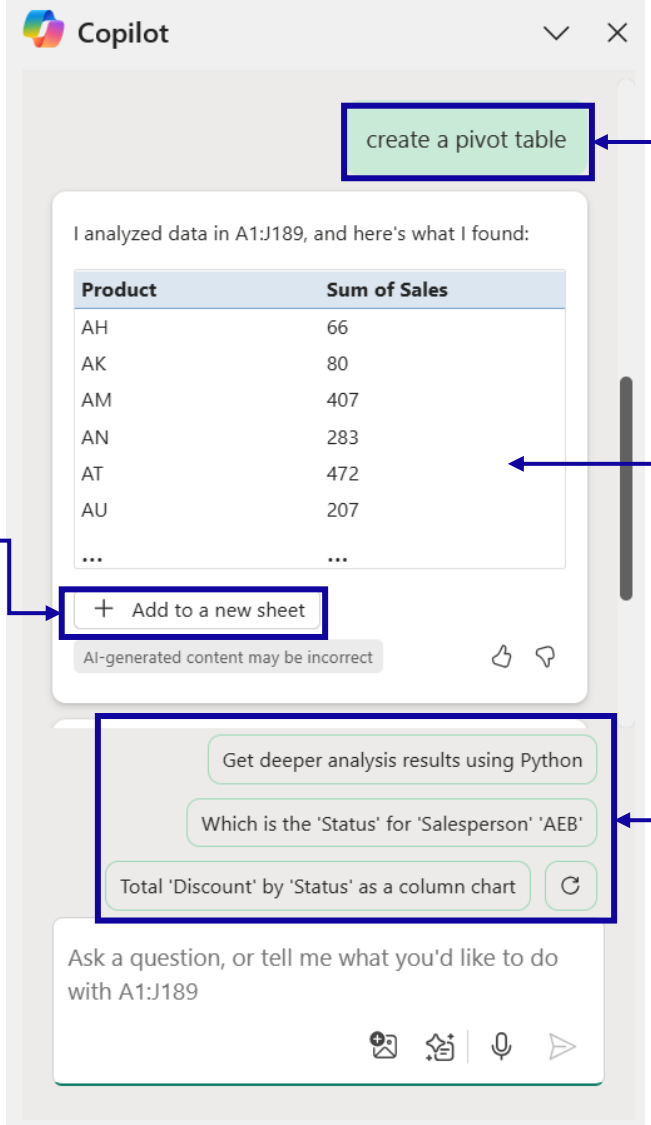
4. Select insert column

Select insert column to add the formula column to your table.

Creating a pivot table

Use case

Excel | Access



1. Ask with a prompt

Based on your table full of data, you can create a pivot table. Ask for a general pivot table or provide Copilot already with some input for the pivot table.

2. Review the table

Review the pivot table that Copilot created.

3. Add to sheet

A pivot table can be added to a **new** sheet. Click on **Add to sheet**.

4. Use prompt suggestions

Not satisfied with the pivot table that Excel provided? Use prompt suggestions to generate a different pivot table.

Using Copilot in an existing Excel file

Use case

Excel | Access

1. Navigate to Home tab

You can find the Copilot button in the top ribbon of the Home tab within Excel.

2 Access Copilot

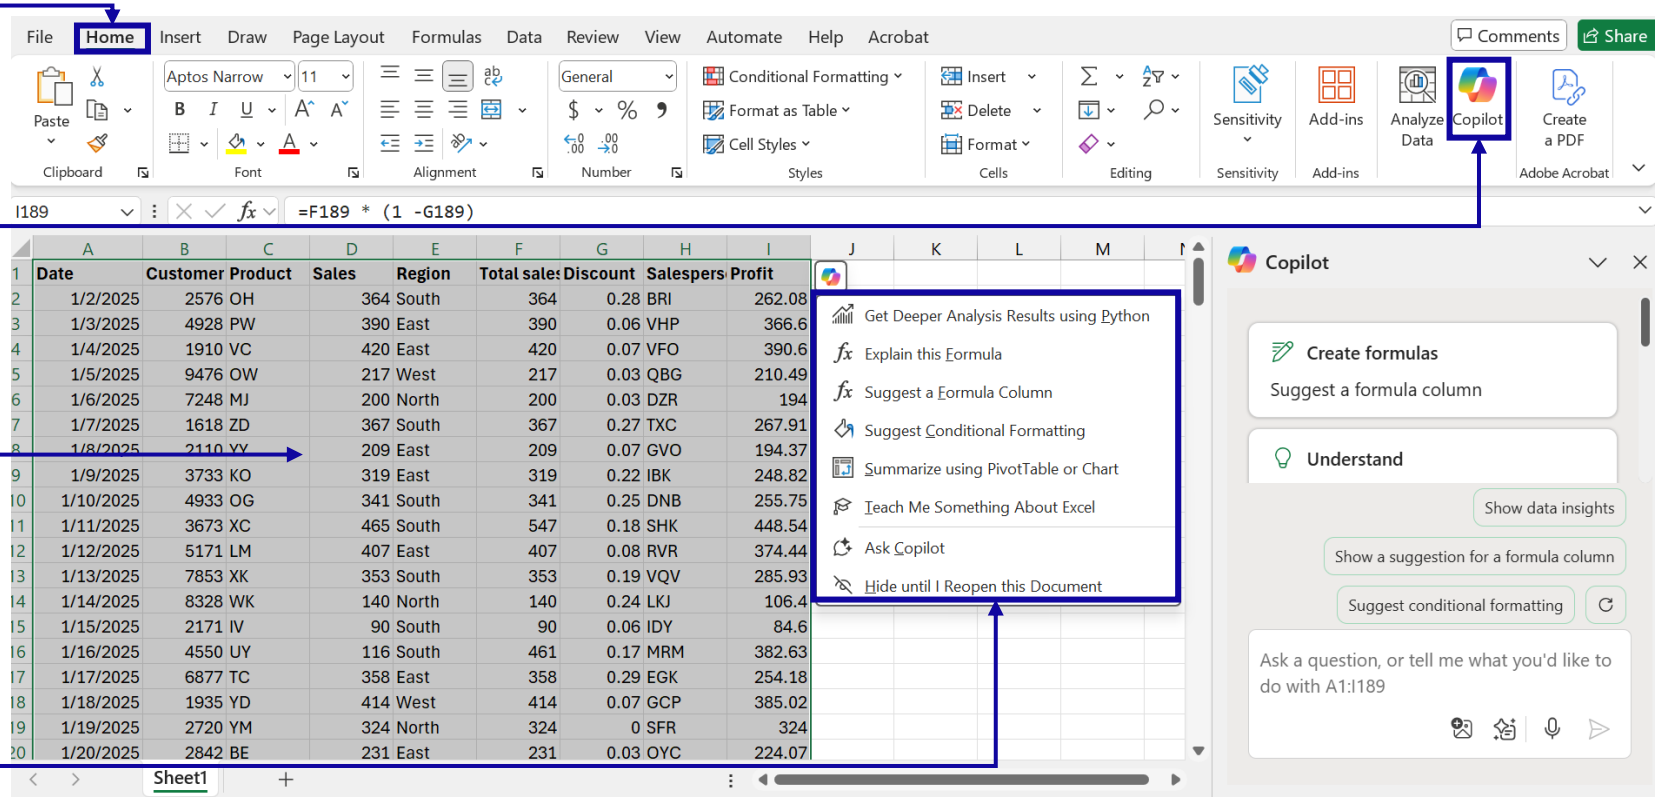
Click on the Copilot button to activate and access Copilot.

3. Select cells/data

Select cells/data within the table to use Copilot features for insights, formula assistance, and data filtering/sorting.

4. Use suggested prompts

Right click and choose from suggested prompts to support you.



Digital
Transformation
Engine

4. Copilot in Excel

Application Training

4.1 Benefits and use cases

4.2 Access

4.3 Prompting

ASML

Prompting in Excel

Try out the following useful prompts!

Excel | Prompting

Create content

Create a project tracking table, and highlight progress with different colors.

Write a formula [for the average of each column]

Create a column that calculates [the total sales for each employee and insert it to column B]

Edit dataset

Highlight cells green where there's a Yes in one or more columns

Apply a red-yellow-green color scale to the [Total column]

Understand dataset

Can you explain some common data analysis techniques that I can use in Excel to analyze my dataset?

Which items have the most [remaining inventory]?

Engine

5. Challenge 3

Let’s practice!

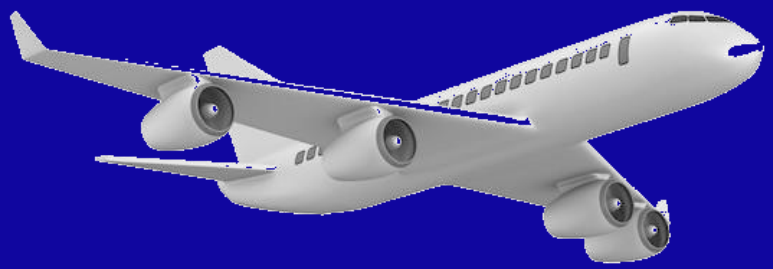
ASML

Challenge 3: Outline strategies with Copilot!

Continue your learning journey!

Challenge | Challenge 3

As a food and facility manager, you are also responsible for facility within the airplanes. **You are asked to present your vision and strategy on facility for the second half of 2025.** Dare to delegate this to Copilot!



THE CHALLENGE

1. Request Copilot to create an outline for your facility strategy in **Word**. Incorporate the following themes: responsible waste management, safety, cleaning and hygiene, and laundry.

2. Now, create an outline for a slide deck in **PowerPoint** as well, based on the outline you generated in Word.

RESULT

Please share your answers as a reply to the Challenge 3 related Viva Engage post.

- Save your Word and PowerPoint file
- Share your outcomes generated with Copilot with us
